Flowering Season: April-October
Harvest Season: May-November
Yearly fruiting cycles: 6 cycles

Stem:
Color: Green and curly
Spines: present

Peel/Skin:
Color at ripe stage: Sunset glow
Texture: Smooth

Scale:
Color: Green with red tip
Length: 3.76 cm
Distance: 1.28 cm

Whole fruit:
Mean weight: 245.2 g
Mean Equatorial diameter: 7.22 cm
Mean Polar diameter: 8.04 cm
Shape: Round

Flesh:
Color: Crimson
Thickness (cm): 6.8
Edible portion: 68.95%
Total soluble solid (% brix): 13.5 (very sweet)
Texture: Granity

Seed:
Distribution of seeds within the pulp: Well-distributed
Seediness (cm³): 22

Potential Yield/ha: 15 tons

References:

Flowering Season: March-October
Harvest Season: April-November
Yearly fruiting cycles: 8 cycles

Stem:
Color: Light green stem
Spines: Present

Peel/Skin:
Color at ripe stage: Light Red
Texture: Smooth

Scale:
Color: Green with dark red tip
Length: 6.05 cm
Distance: 1.5 cm

Whole fruit:
Mean weight: 337 g
Mean Equatorial diameter: 8.89 cm
Mean Polar diameter: 10.48 cm
Shape: Round

Flesh:
Color: Brick red
Thickness (cm): 12.5 cm
Edible portion: 75%
Total soluble solid (% brix): 13.6 (very sweet)
Texture: Grainy

Seed:
Distribution of seeds within the pulp: Well-Distributed
Seediness (cm³): 50
Potential Yield/ha: 37 tons

Flowering Season: March-November
Harvest Season: April-November
Yearly fruiting cycles: 8 cycles

Stem:
Color: Light green stem
Spines: Present

Peel/Skin:
Color at ripe stage: Light Red
Texture: Smooth

Scale:
Color: Yellow green with red tip
Length: 5.1 cm
Distance: 3.14 cm

Whole fruit:
Mean weight: 401 g
Mean Equatorial diameter: 8.93 cm
Mean Polar diameter: 10.37 cm
Shape: Round

Flesh:
Color: Light red
Thickness (cm): 4.5 cm
Edible portion: 75.02%
Total soluble solid (% brix): 11.2 (sweet)
Texture: Grainy

Seed:
Distribution of seeds within the pulp: Well-Distributed
Seediness (cm³): 55
Potential Yield/ha: 20 tons

Flowering Season: March-November
Harvest Season: April-October
Yearly fruiting cycles: 8 cycles

Stem:
Color: Green stem with white edge
Spines: present

Peel/Skin:
Color at ripe stage: Canada red
Texture: Smooth

Scale:
Color: Green with white tip
Length: 4.34 cm
Distance: 2.6 cm

Whole fruit:
Mean weight: 466.46 g
Mean Equatorial diameter: 8.55 cm
Mean Polar diameter: 11.79 cm
Shape: Oblong

Flesh:
Color: White
Thickness (cm): 8.3 cm
Edible portion: 80.72%
Total soluble solid (% brix): 11.2 (sweet)
Texture: Grainy

Seed:
Distribution of seeds within the pulp: Well-Distributed
Seediness (cm³): 55
Potential Yield/ha: 30 tons
